

It's not just about packaging

It's meeting your requirements, exact specifications
and exceeding your expectations.

Packaging Supplies

Boxes

Corrugated Stock Boxes
Master Cartons
Multi-Depth Cartons

Protective Interior Packaging

Bubble & Foam Rolls
Kraft Poly Rolls & Rust Inhibitive Paper Rolls
Single Face Corrugated Rolls

Protective Pallet Packaging

Cornerboard
Recycled Fiber & Corrugated Pallet Sheets
Poly & Steel Strapping
Stretch Film ~ Machine & Hand Grades

Stockroom Supplies

Bubble & Padded Mailers
Poly Bags
Tapes

Partitions, Pads & Sheets

Partitions - Fiber or Corrugated

We identify which application is the best fit for your product. Fiber partitions are made from 100% recycled materials and are 100% recyclable. They are ideally suited for automated production lines and provide a more compact alternative to corrugated partitions, minimizing warehousing and shipping costs. Fiber is a "cleaner" option and produces less dust during the insertion process. These partitions can be designed by incorporating a variety of features such as die cutting, locking and notching to ensure a smooth insertion on the production line. They are offered in a wide range of calipers to provide the appropriate protection needed.

Manufacturing Grades

Recycled Fiberboard ~ Caliper Range: .018- .050

Poly Chip

SBS - Solid Bleached Sulfate

MCS - Milk Carton Stock

Corrugated partitions offer optimal protection by providing superior top-to-bottom compression strength. Stacking strength is a critical component of packaging design. Corrugated partitions provide excellent side-to-side cushioning and protect against potential abrasion. In many applications, they are the preferred choice for tall height partitions. Non die-cut corrugated partitions can be manufactured from a minimum of 2" tall by 5" wide to a maximum of 23" tall x 66" wide.

Manufacturing Grades

Corrugated ~ 125#/26 ECT Single Wall

to 275#/48 ECT Doublewall

Plastic Corrugated

Pads & Sheets

We supply a wide variety of fiber pads, slip sheets and scored pads produced in single ply to multi-ply densities. Recycled fiber typically offers a lower cost advantage with the added benefit of reduced warehouse space for storage.

Corrugated pads provide additional strength and cushioning using single, double and triple wall densities. They can be used for interior packaging protection as well as exterior pallet protection; customized as needed.

The integrity of your product is key to maintaining customer satisfaction, sustaining growth and increased profitability.

Premier Packaging & Supply, Inc. offers innovative solutions to deliver your product with a cost efficient design and optimum protection. PPS was established in 1998. We supply customized packaging to select markets in the U.S. and Europe. Our goal is to provide a seamless process from design to delivery. We sample the approved prototype and assist with the testing process to ensure complete product success. PPS is independent which allows us to strategically align our resources with selected manufacturers; each with their own unique production capabilities. Instead of selling what one plant wants you to purchase, we work for you; with each production facility that is specifically tooled to best meet your packaging needs.

Foam

Foam is a unique packaging component. It is extremely adaptable and can be molded/fabricated to conform to virtually any shape or size. It's flexible, lightweight and non-abrasive. It's also very resilient and efficient in absorbing shock.

PPS offers complete product development from design and sample prototypes to the approved final specifications. We create your custom interior packaging by utilizing and combining various substrates; molded urethane, die-cut polyethylene/polyurethane and convoluted foam. This cushioning can be laminated to fiber, corrugated, plastic or plywood to create the optimum protection for your application.
